

TASK 5: Database Testing (SQL)

Table: Appointments

Columns: ID, user_id, provider_id, date, time_slot, status, payment_status

1. Fetch upcoming confirmed appointments

```
SELECT *  
  
FROM Appointments  
  
WHERE date >= CURRENT_DATE  
  
AND status = 'Confirmed';
```

Expected Result: Displays all upcoming confirmed appointments.

2. Fetch appointments where payment is successful but status is not confirmed

```
SELECT *  
  
FROM Appointments  
  
WHERE payment_status = 'Successful'  
  
AND status <> 'Confirmed';
```

Expected Result: Displays records where payment is successful but appointment is not confirmed.

3. Identify duplicate bookings for the same provider and same time slot

```
SELECT provider_id,  
  
       date,  
  
       time_slot,  
  
       COUNT(*) AS Total_Bookings  
  
FROM Appointments  
  
GROUP BY provider_id, date, time_slot  
  
HAVING COUNT(*) > 1;
```

Expected Result: Displays duplicate bookings for the same provider, date, and time slot.
